When to use this Starter Kit

- A new Active Directory Setup in AWS
- Extending your AD infrastructure into AWS
- Adding additional Domain Controllers in AD

Why you need this bundle

- Easy deployment
- One-size-fits all approach
- Covers 75% of the scenarios encountered on the field in the SMB space when it comes to AD deployment
- Predictable cost
- Best practices included
- Ready to deploy artifacts

Server Placement

Public Subnet

- Never place your Domain Controllers here. It will be exposed to the internet and it is a major security risk.

NAT Subnet

In the NAT subnets you will place:

- Web Servers that need access to the internet but no direct exposure
- DC's that need connection to the internet without Direct exposure
- Place your Domain Controller here just in exceptional cases

Private Subnet

In the private subnets you will place:

- Database Servers
- Domain Controllers
- Servers that do not need any internet exposure

How do you deploy the Starter Kit for your customers?

- Our team of AWS experts is always available to provide support and assistance. You can rely on Westcon's expertise and experience to deliver your customers a secure, high-performance, and cost-effective AWS infrastructure.
